

Master in Sustainability in Health

Join the forefront of change by enrolling in the Sustainability in Health Master's program, designed to shape professionals into Health Sustainability Managers. As experts in sustainability within health processes, our students will have the opportunity to acquire a robust set of skills and competencies that are increasingly in demand.

What's in it for you?

- **Strategic Impact:** Learn how to implement sustainable policies and operational strategies in health processes
- **Innovation Focus:** The master's program is designed by a multidisciplinary team, leveraging advanced methods of distance education online, ensuring quality and flexibility
- **Cutting-edge curriculum:** The program's curriculum is designed to provide students with a deep understanding of the latest research and best practices in sustainability in health
- **Versatile Expertise:** Gain expertise in understanding the interconnection between health and energy, food, water, raw material consumption, emissions, and waste
